¿HOW TO USE OUR ABSORBENT CAT LITTERS?

1 FILL THE LITTER BOX

Fill the litter box with a 5-7 cm (2-3 inches) layer of SepiCat absorbent litter.

If the box is too full, litter can be easily thrown out when your cat digs.

2 REMOVE DRY FECES

The litter instantly absorbs urine, eliminating odors.

It is recommended to remove dry feces daily.

3 STIR THE LITTER LAYER

Stir the absorbent litter layer regularly.

Do not flush cat litter down the toilet.

4 NEVER DISPOSE OF LITTER DOWN THE TOILET

Do not flush cat litter to avoid clogs. To maintain the healthiest conditions, the litter box should always be kept clean.

5 DEEP CLEAN THE SANITARY BOX

After several days of use, remove the old litter. Clean the litter box thoroughly. Then fill the litter box with new SepiCat litter.

6 REGULARLY REFILL THE LITTER BOX WITH NEW LITTER

Thoroughly clean the litter box every time you change the litter.

Avoid using bleach, ammonia, or other chemicals that your cat may not like.

Regularly refill the litter box with new absorbent litter to maintain a healthy environment for your family and pet.
